A radio-controlled aircraft (often called RC aircraft or RC plane) is a small flying machine that is controlled remotely by an operator on the ground using a hand-held radio transmitter. The transmitter communicates with a receiver within the craft that sends signals to servomechanisms (servos) which move the control surfaces based on the position of joysticks on the transmitter.

Paul Bradley's Model Airplane Plans Page is definitely worth checking out. Mr. Bradley has taken the time to produce some very nice free model airplane plans in PDF format.. Most of these are smaller free-flight airplanes, but there are some free RC airplane plans as well. Check out these plans for an actual radio controlled version of the Star Trek Starship Enterprise!

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

Thanks to the graciousness of Charlie Morey, we've been given the opportunity to create a PDF archive of Slope Soaring News. For those not familiar with Slope Soaring News, SSN was Charlie's brainchild which enjoyed a run of twenty issues in the late 1980s. The first issue was published in September of 1988, and the last issue was dated June/July 1990.

Servo control is achieved by sending a servo a PWM (pulse-width modulation) signal, a series of repeating pulses of variable width where either the width of the pulse (most common modern hobby servos) or the duty cycle of a pulse train (less common today) determines the position to be achieved by the servo. The PWM signal might come from a radio control receiver to the servo or from common ...
