A solar cell, or photovoltaic cell, is an electrical device that converts the energy of light directly into electricity by the photovoltaic effect, which is a physical and chemical phenomenon. It is a form of photoelectric cell, defined as a device whose electrical characteristics, such as current, voltage, or resistance, vary when exposed to light.. Individual solar cell devices can be ...

The cell cycle or cell-division cycle is the series of events that take place in a cell leading to its division and duplication of its DNA (DNA replication) to produce two daughter cells. In bacteria, which lack a cell nucleus, the cell cycle is divided into the B, C, and D periods. The B period extends from the end of cell division to the beginning of DNA replication.

### **Cell cycle - Wikipedia**

The eukaryotic cell cycle comprises a sequence of events that culminate in cell division. Proteins at different checkpoints throughout the cell cycle regulate progression from one phase to the next—a process that usually works without errors. When errors do occur, they can have catastrophic ...
