In electrical engineering, ground or earth is the reference point in an electrical circuit from which voltages are measured, a common return path for electric current, or a direct physical connection to the earth.. Electrical circuits may be connected to ground (earth) for several reasons. In mains powered equipment, exposed metal parts are connected to ground so that if, due to any fault ...

This noise is also called static noise and it is the natural source of disturbance caused by lightning discharge in thunderstorm and the natural (electrical) disturbances occurring in nature.. Industrial noise. Sources such as automobiles, aircraft, ignition electric motors and switching gear, High voltage wires and fluorescent lamps cause industrial noise.

and the reference ground is the inside surface of the shield<sup>1</sup>; the two signals are equal in amplitude but 180 degrees out of phase. These two out-of-phase signals cancel each other out along the length of the coax, preventing it from radiating, and delivering almost all of the RF energy to the antenna feedpoint.
