

encyclopedia of ocean sciences pdf

Principal lunar semi-diurnal constituent. In most locations, the largest constituent is the "principal lunar semi-diurnal", also known as the M₂ (or M₂) tidal constituent. Its period is about 12 hours and 25.2 minutes, exactly half a tidal lunar day, which is the average time separating one lunar zenith from the next, and thus is the time required for the Earth to rotate once relative to the Moon.

Tide - Wikipedia

Examples. In a mass of continuum that is rotating like a rigid body, the vorticity is twice the angular velocity vector of that rotation. This is the case, for example, of water in a tank that has been spinning for a while around its vertical axis, at a constant rate.
