General introduction on zeolites and catalysis 3 The zeolite structure consists of a pore system with channels in one, two or three dimensions and additionally inner cavities may be present.

General Introduction on Zeolites and Catalysis

6 1 Introduction to Zeolite Science and Catalysis Zeolite is one of the metal oxides which have the strong solid acidity. The strong acidity in zeolites is generated by aluminum atoms incorporated into the T-site (tetrahedral site) of the framework, and the strength of the acidity depends on the microstructure of zeolite framework.

Introduction to the Structural Chemistry of Zeolites Rau F. Lobo University of Delaware, Newark, Delaware, U.S.A. This chapter provides an introduction to the structure of zeolites and related crystalline microporous materials. The structural characteristics of the zeolite family make it unique among inorganic materials.

Introduction to the Structural Chemistry of Zeolites

in 1959 a zeolite Y - based catalyst was marketed by Carbide as an isomerization catalyst [21] . In 1962 Mobil Oil introduced the use of synthetic zeolite X as a hydrocarbon cracking catalyst. In 1969 Grace described the first modification cation chemistry based on steaming zeolite Y to form an "ultrastable" Y.
