A widely used vocabulary for risk management is defined by ISO Guide 73:2009, "Risk management.Vocabulary." In ideal risk management, a prioritization process is followed whereby the risks with the greatest loss (or impact) and the greatest probability of occurring are handled first, and risks with lower probability of occurrence and lower loss are handled in descending order.

Risk management - Wikipedia

Broadly speaking, a risk assessment is the combination effort of 1. identifying and analyzing potential (future) events that may negatively impact individuals, assets, and/or the environment (i.e., risk analysis); and 2. making judgements "on the tolerability of the risk on the basis of a risk analysis" while considering influencing factors (i.e., risk evaluation).
