

zemax tutorial pdf

In optics a ray is an idealized model of light, obtained by choosing a line that is perpendicular to the wavefronts of the actual light, and that points in the direction of energy flow. Rays are used to model the propagation of light through an optical system, by dividing the real light field up into discrete rays that can be computationally propagated through the system by the techniques of ...

In optics, a Gaussian beam is a beam of monochromatic electromagnetic radiation whose transverse magnetic and electric field amplitude profiles are given by the Gaussian function; this also implies a Gaussian intensity (irradiance) profile. This fundamental (or TEM 00) transverse gaussian mode describes the intended output of most (but not all) lasers, as such a beam can be focused into the ...

Gaussian beam - Wikipedia

MINEQL+ is a powerful and easy-to-use chemical equilibrium modeling system that can be used to perform calculations on low temperature (0-50oC), low to moderate ionic strength (0.5 M) aqueous systems.MINEQL+ is a data driven program, so you do NO programming.
